

NOVAS

Restricted Master Keying

Effective security requires effective control and management of keys. This is true for a single door and large complex master key systems. If it is possible for anybody to obtain a key, the premises become vulnerable to unauthorised or criminal intruders.

In contrast, if it is too difficult to get duplicate keys, legitimate users will be inconvenienced. For this reason, Novas Architectural offers a high level of security with the 6 PIN restricted profile N1A/MSA GMK/MK system.

In choosing the level of security you require, it is imperative to match your requirements and expectations.

Please consider the following:

- A. What are you securing? How important are the contents?
- B. What are your current and future requirements? Will the function of a specific room change? Will there be additional rooms added?
- C. What level of service will you require? Business and/or after hours?

It is important to note that the Novas Architectural N1A/MSA keying system will meet your criteria. Consult one of our trained sales representatives who will develop a solution to meet your needs.
